

ENZY

Key catalysts – unlock unused nutrients.

Enzy – the concentrated portfolio of essential enzymes for animal nutrition. Feedstuffs of today are precisely geared to meet the energy and nutritional demands of the animals. However, some ingredients cannot be degraded due to a lack of the appropriate enzymes in the digestive tract of poultry and pigs. Using Enzy products improves nutrient digestibility and increases animal performance. Enzy feed enzymes offer more flexibility in feed optimisation and help to save limited resources, and thus also the environment.

Substrate specific enzymes. It is generally advisable to supplement all wheat-, barley- and corn-based feed with special enzymes. The most effective feed enzymes, such as phytase, xylanase and glucanase, help to get the best out of every feed.

technology supplies highly concentrated products that are suitable for all types of feed. Free-flowing powder or dust-free microgranulate is mixed directly in the feed. Alternatively, liquid formulations are available for spraying on after pelleting.

The features of Enzy:

- Phytase and NSPase for poultry and pigs
- Proven efficacy
- High cost efficiency in feed

Proven efficacy. In more than 40 scientific studies in leading international research institutes Enzy products showed consistent positive results. Important performance parameters were significantly improved in all trials. At the same time it was possible to clearly demonstrate cost efficiency.

Efficient manufacturing process. High product yield in the manufacturing process with yeast, minimised costs in the feed. Enzy products contain enzymes in a standardised and optimised ratio. Proven formulation

Packaging:

Bags of 25 kg and big bags of 1,000 kg net.
Canisters of 25 kg net, drums of 200 kg net,
IBC of 1,000 kg net.

Quality right from the start. As a researching company in the feed additive industry, Kaesler Nutrition develops innovative enzyme products. To do so, we draw on a wide network of experts from the fields of biotechnology, production and formulation. We give top priority to high product quality and safety.

| Category | Activity | Product | Form |
|--------------|---|----------------|--|
| Phytase | 6-phytase | ENZY Phostar | Powder  |
| | | | Liquid  |
| Carbohydrase | Endo-1,4- β -xylanase, Endo-1,3(4)- β -glukanase | ENZY Carboplus | Powder  |
| | | | Liquid  |
| Carbohydrase | Endo-1,4- β -xylanase (non-EU) | ENZY Carboflex | Granule  |
| | | | Liquid  |
